HOSTING WITH ⊙MLM
PROJECT SERVICES

**Dedicated hosting provides increased security over shared environments**

DEDICATED SECURE ENVIRONMENT

A dedicated environment is a server, or group of servers that are dedicated to your organization. MLM hosts the infrastructure that form the dedicated environment. Unlike in a shared environment, no other organizations share the resources, they are reserved for your organization's use only. In a dedicated environment, you may also have administrative privileges over the server, which means you are in control of how the server is being utilized. For example, you can install additional software provided that you have the appropriate licensing rights to that software (and installation of that software does not interfere with other software on that machine), and you can make your own code modifications to the installed software. You are able to perform actions that you typically would not be able to do in a shared environment (install custom plug ins or other software that extends the functionality of services you subscribe to).

Providing the path to a complete solution, contact us for more information.

SHARED ENVIRONMENT

Hundreds or thousands of users subscribe to hardware resources The users share the infrastructure, platform, and applications on demand. All resources are distributed dynamically.

DEDICATED ENVIRONMENT

A single organization utilizes all the resources of a server or servers.

KEY BENEFITS

- Secure
- Increased Performance
- Reduced Costs
- Fast Deployment
- Cloud Access
- Certified Data Centers
- Disaster Recovery
- You Control Your Data
